IM Penetration Test Assessment™
An Ingram Micro Professional Service

Find the gaps now, before someone else does.

The IM Penetration Test Assessment helps businesses identify vulnerabilities in their security defenses and provides a recommended approach for remediation based on industry best practices. Ingram Micro will assume the role of an external attacker and attempt to circumvent security controls to gain access to the target.

With the IM Penetration Test Assessment we will identify high-risk vulnerabilities that may be difficult or impossible to detect with scanning software to keep your business protected from potential threats. With data breaches becoming more common, these types of assessments are necessary to not only protect your business, but your clients as well. Ingram Micro is able to provide not only the assessment, but a recommended approach to secure vulnerabilities discovered that continue to protect your assets so you can focus on daily projects.

At the end of the day, this is your data, networks, and business. Ingram Micro Professional Services enables our partners to expand their geographic reach and increase profitability. Let Ingram Micro act as the trusted provider so you can continue to be the trusted advisor to your clients.

Deliverables

- Pre-sales consultation with partner
- Define the Statement of Work (SOW) and establish timelines for completion
- Conduct an security penetration assessment
- Presentation of the Network Penetration Test Assessment Report
IM Expert Service Portfolio:

**IM Wireless Network Assessment**

IM Wireless Network Assessment enables Ingram Micro’s solution provider partners to ensure their customers have reliable and secure wireless networks. The service is customizable; deliverables typically include the following: pre-sales consultation; scope of work; passive and active site surveys (site map with wireless access point locations and mounting instructions, areas of wireless coverage, configuration information); presentation on the assessment report’s finding and recommendations; and hard and soft copies of the report. Please refer to the service datasheet for more information.

**IM Virtualization Health Check**

IM Virtualization Health Check enables Ingram Micro’s solution provider partners to ensure their customers have an optimized and secure virtualized IT environment. The service is customizable; deliverables typically include the following: pre-sales consultation; scope of work; best practices assessment (a variety of tools are used to collect system information and usage data); hardware assessment (performance, consolidation ratios, etc.); storage assessment; management systems assessment; one (1) to four (4) days on-site and off-site development of assessment report; presentation on the assessment report’s finding and recommendations; and hard and soft copies of the report. Please refer to the service datasheet for more information.

**IM Web Application Vulnerability Assessment**

The IM Web Application Vulnerability Assessment helps businesses identify vulnerabilities in web application source code and provides a recommended approach to remediate vulnerabilities found based on industry best practices. During our assessment an Ingram Micro security assumes the role of an external attacker and will attempt to exploit potential weaknesses in a web applications source code to gain access to corporate systems.

**IM VCE Deployment and Implementation**

The IM VCE Deployment and Implementation Service for Vblock™ System 100 and Vblock System 200 PSVC-DEP(N)-00-A04 (“Service”) provides collaborative planning, design, and on-site/remote deployment and implementation services for a Vblock 100 or Vblock 200. The Service can help align the scalability, flexibility, and cost savings associated with Vblock Systems to operational objectives. Best practices and proven processes help to facilitate non-disruptive integration of Vblock Systems into a customer environment. This Service includes an up to two-hour interactive customer knowledge-transfer session to maximize the investment in the Vblock System.

**Contact IM Professional Services Today**
